

What is claimed is:

- Sub A1
1. A system for a telephone, comprising:
    - (a) a mechanical device associated with a conversation element;
    - (b) a memory, coupled to the mechanical device, for storing an internal conversation element representing an audible utterance for a remote listener; and
    - (c) a processor, coupled to the memory and the mechanical device, for generating the audible utterance in response to a user interaction with the mechanical device and the conversation element.
  2. The system of claim 1, wherein the mechanical device includes a first button.
  3. The system of claim 1, wherein the processor includes an audio generator.
  4. The system of claim 1, further comprising:
    - (d) an impedance matching circuit coupled to the processor.
  5. The system of claim 1, further comprising:
    - (d) an earpiece, coupled to the processor, for receiving the audible utterance and a voice of the remote listener.
  6. The system of claim 1, further comprising:
    - (d) an audio output for coupling to a mobile telephone input.
